

PRESS RELEASE

Global Leading Home Care Products Provider Aerotel Medical System, Form an Alliance with Italian Leading telemedicine Services Provider Telbios

The agreement with Aerotel expands the range of telemedicine and home care services offered by Telbios, which includes Tele-assistance, Tele-cardiology, and Tele-radiology services. Health organizations such as hospitals, private and public healthcare institutions can now offer their patients a simple and efficient means to monitor the state of their health.

Milan, Italy, July 24, 2006 -- Telbios, the leading telemedicine services provider in Italy, has signed an exclusivity agreement with Aerotel Medical System, world leader in manufacturing of medical devices and software platforms for telemedicine and Home Care services, for exclusive marketing and distribution of Aerotel innovative products in the Italian market.

The agreement with Aerotel expands the range of telemedicine and home care services offered by Telbios, which includes Tele-assistance, Tele-cardiology, and Tele-radiology services. Health organizations such as hospitals, private and public healthcare institutions can now offer their patients a simple and efficient means to monitor the state of their health.

"The agreement with Aerotel is important since it gives us access to devices and technologies that are state of the art and that complete Telbios's range of services offered," says Leopold Genovesi, CEO of Telbios.

Aerotel's devices such as EKG machines allow the patients to self measure the cardiologic parameters and send them, in short time, via telephone or GSM mobile phone handset, from any location to the call center. The transmitted information can be instantly interpreted by the team of cardiologists of San Raffaele Scientific Institute in Milan working within Telbios Telemedicine Service Center on a 24 hours call basis and immediately sent to the attending GP of the patient.

"Thanks to this technology the chronically ill patients can now avail of those technologies and are offered the possibility to be monitored without leaving the comfort of their home or while traveling and still follow a tight treatment protocol that results in the benefit of their quality of life," conclude Genovesi

"Telemedicine is a growing market all over the globe and in Italy we can also see a very positive growth," says David Rubin, President & CEO of Aerotel Medical Systems. "Having Telbios as a business partner will allow us both to develop dedicated solutions to the growing Italian market."

Monitoring the chronically ill patients can be considered as an emergency on a national level: in Italy there are over 2.5 million diabetic patients, over 4 million patients suffering for respiratory dysfunction, one million of patients suffering from chronic heart failure and the number of patients under anticoagulation treatment exceeds one million. Patients with two or more chronic diseases are the 19.4% of the population.

Telemedicine is the most suitable remote follow up method for the cited pathologies. Telemedicine reduces the unnecessary hospitalizations and reduces waiting lists for medical treatment with a significant saving factor on economical resources.
